

DML & Database Assignment

Note:

1. Use the Best Practice and make the fields and records as per the requirement of the question.
2. While submitting Assignment on Git Branch Name should be feature/dml-assignment.

Write a Apex class with name **DMLAssignment** which will have following methods:

1. Select those students whose first name starts with letter "S" and update their last name by appending "Test" and one consecutive number.

EXAMPLE :

Before update	After update
Sam Karan	Sam Karan Test 1
Shubham Singh	Shubham Singh Test 2
Somil Sharma	Somil Sharma Test 3

```
public static void appendingName()
```

2. Insert and link the one opportunity with all those accounts records(which are present in your salesforce org) who do not have any opportunities linked to them.
Note: Inserted opportunity's name should first have an account name in it then append 'First Opportunity' in it.

```
public static void createOpportunitiesWithoutLinks()
```

3. First insert account and contact related to it then delete it,then Undelete those records of Account object.

DML & Database Assignment

Use Account Data:

Name=Unive Container

Use Contact Data:

LastName = 'Carter last'

```
public static void manipulateAccountAndContact()
```

4. Write a program to:

- a. Delete those student records permanently from recycle bin of your salesforce org who have the second letter 'r' in their first name.

```
public static void deleteStudentsWithSecondLetterR()
```

- b. Undelete the records of students who got deleted in between **dateValue1** & **dateValue2** by "Salesforce Demo" user.

Note: **dateValue2** is greater than **dateValue1**.

```
public static void undeleteStudentsDeletedByDemoUser(Date dateValue1, Date dateValue2)
```

5. Insert Account and Contact record in one insert call. Note: Make a company email field (with API Name: Company_Email__c) of Email type on Account object. It should be an external id, and unique. Use this field to provide the solution to this question.

Use Account Data:-

Name = 'Test Account', Company_Email__c = 'testcompany@gmail.com'

Use Contact Data:-

LastName='Doe'

```
public static void insertAccountContactRecords()
```

6. Insert 5 records in Account object and then create related one or more contact and one or more opportunity to all 5 accounts and add one or more opportunity product to

DML & Database Assignment

those opportunities.

Note: In your code, Use

- a. Standard Price book with Name: **Standard Price Book**
- b. Product with Name: **GenWatt Diesel 10kW**

```
public static List<sObject> insertAndCreateRelatedRecords()
```

7. Delete those Accounts who have more than 2 open opportunities and no closed opportunities.

```
public static void deleteOpp()
```

8. Write a program to get the total number of records present in an object(Object should be passed as an argument)

For Example: If we pass Student_c then it should return the total number of students present in student object and if we pass Account then it should return the total number of records in Account object

```
public static Integer totalRecordsInObject(String objectName)
```

9. Insert n number of student's records present in stdToInsertList variable. Rollback all the inserted records if the number of successful insertion is less than 80%

```
public static void rollbackStudentRecords(List<Student__c> stdToInsertList)
```
